

- **Complies with Directive 2002/95/EC (RoHS)**
- **Fundamental-Mode Oscillation at 718.864 MHz**
- **Quartz SAW Stabilized and Filtered "Diff Sine" Technology**
- **Voltage Tunable for Phase Lock Loop Operations**
- **Optical Timing Reference for Forward Error Correction Applications**

The output of this device is generated and filtered by narrowband quartz SAW elements at 718.864 MHz. The configuration of this clock is intended to provide a pure signal for optical timing applications in noisy signal environments. The Q/Qbar differential output swing of ± 1 volt about 0 vdc has symmetry better than $\pm 1\%$ into loads from 40 ohms to 70 ohms; determined by customer application. The long term frequency accuracy is set by an external reference source allowing this device to complete a Phase Lock Loop design without the usual noise and jitter problems associated with PLL's.

Absolute Maximum Ratings

Rating	Value	Units
DC Supply Voltage	0 to 5.5	VDC
Tune Voltage	0 to 6	VDC
Case Temperature	-55 to 100	°C

Lid Symbolization (YY=Year, WW=Week)		RFM OP4018B YYWW					

CAUTION: Electrostatic Sensitive Device. Observe precautions for handling. COCOM CAUTION: Approval by the U.S. Department of Commerce is required prior to export of this device.

NOTES:

1. Unless otherwise noted, all specifications include any combination of load VSWR, VCC, and TC. In addition, Q and \bar{Q} are terminated into 50 Ω loads to ground. (See: Typical Test Circuit.)
2. Customer useful tune range in excess of what part requires over temp, aging, pushing, pulling & accuracy.
3. The design, manufacturing process, and specifications of this device are subject to change without notice.
4. Only under the nominal conditions of 50 Ω load impedance with VSWR ≤ 1.2 and nominal power supply voltage.
5. Symmetry is defined as the pulse width (in percent of total period) measured at the 50% points of Q or \bar{Q} . (See: Timing Definitions.)
6. Jitter and other spurious outputs induced by externally generated electrical noise on V_{CC} or mechanical vibration are not included in this specification, except where noted. External voltage regulation and careful PCB layout are recommended for optimum performance.
7. Applies to period jitter of Q and \bar{Q} . Measurements are made with the Tektronix CSA803 signal analyzer with at least 1000 samples.
8. Linearity is a function of the percentage variation from a permitted linear deviation versus the amount of frequency tune range. See *Linearity Definition*.
9. One or more of the following United States patents apply: 4,616,197; 4,670,681; 4,760,352.
