#### NOTES:

1. Unless noted otherwise, all specifications apply over the operating temperature range with filter soldered to the specified demonstration board with impedance matching to 50  $\Omega$  and measured with 50  $\Omega$  network analyzer.
2. Unless noted otherwise, all frequency specifications are referenced to the nominal center frequency,  $f_c$ .
3. Rejection is measured as attenuation below the minimum IL point in the passband. Rejection in final user application is dependent on PCB layout and external impedance matching design. See Application Note No. 42 for details.
4. The design, manufacturing process, and specifications of this filter are subject to change.
5. US and international patents may apply.

Technical drawing of a circular component. The top view shows a large outer circle and a smaller inner circle, both centered on a common point marked with a crosshair. A dashed line indicates the center. A leader line points from the text "See Detail 'A'" to the center of the inner circle. The side view shows a cross-section of the component, which is a thick ring. The outer diameter is labeled as 12.0. The inner diameter is labeled as 100 REF. The thickness of the ring is labeled as "B" REF. A detail view at the bottom shows a cross-section of the ring with a central hole. The outer diameter of the ring is 13.0, the inner diameter of the ring is 20.2, and the thickness of the ring is 2.0.
