

- **SAW Frequency Stabilized**
- **Fundamental-mode Oscillation at 1090 MHz**
- **Ideal for ATC Transponder Applications**
- **Complies with Directive 2002/95/EC (RoHS)**

The frequency of this oscillator is stabilized by UHF surface-acoustic-wave (SAW) technology, providing excellent performance in a compact, rugged oscillator operating at the fundamental frequency of 1090 MHz. The highly-reliable HO1091 is designed for use in Air Traffic Control Transponders.

CAUTION: Electrostatic Sensitive Device. Observe precautions for handling. COCOM CAUTION: Approval by the U.S. Department of Commerce is required prior to export of this device.

NOTES:

- One or more of the following United States patents apply: 4,760,352; 5,787,117; and 7,260,375.
- Unless noted otherwise, all specifications are listed at $T_A = +25^\circ\text{C} \pm 2^\circ\text{C}$, $V_{CC} =$ nominal voltage ± 0.01 VDC, and load impedance = 50Ω with $\text{VSWR} \leq 1.5:1$.
- The design, manufacturing process, and specifications of this device are subject to change without notice.
- Applies to oscillator only and not to sidebands caused by external electrical or mechanical sources. (Dedicated external voltage regulation with low-frequency filtering for the DC power supply and proper circuit board layout are recommended for optimum spectral purity.)
- For specified maximum operating load VSWR, any angle, at f_O . No instability or damage will occur for any passive load impedance.
- For any combination of V_{CC} and T_A within the specified operating ranges.
- Applies for any combination of Note 5 and 6 conditions.
