

- Steep Roll-off SAW Filter for 869.00 MHz Unlicensed Band
- Complies with Directive 2002/95/EC (RoHS)
- No Matching Required for Operation in 50 $\Omega$  Environment
- Complies with AEC-Q200

**SF2137E-2**

**869.00 MHz  
SAW Filter**

**CAUTION: Electrostatic Sensitive Device. Observe precautions for handling.**

#### NOTES:

1. Unless noted otherwise, all specifications apply over the operating temperature range with filter soldered to the specified demonstration board with impedance matching to 50  $\Omega$  and measured with 50  $\Omega$  network analyzer.
2. Unless noted otherwise, all frequency specifications are referenced to the nominal center frequency,  $f_C$ .
3. Rejection is measured as attenuation below the minimum IL point in the passband. Rejection in final user application is dependent on PCB layout and external impedance matching design. See Application Note No. 42 for details.
4. The design, manufacturing process, and specifications of this filter are subject to change.
5. US and international patents may apply.

Technical drawing of a circular component. The main view is a top-down view showing a large outer circle and a smaller concentric inner circle. A central crosshair indicates the center. A leader line points from the text "See Detail 'A'" to the center of the inner circle. To the right, a side view shows the component's profile, which is a thin, elongated shape. Dimensions for the side view include a total length of 100 REF. and a width of 12.0. Below the main view, a cross-section view (Detail A) shows the internal structure of the central hole. It features a central circular hole with a diameter of 2.0. The inner wall of the hole has a thickness of 13.0, and the outer wall has a thickness of 20.2. The cross-section is divided into four quadrants by a vertical and horizontal centerline.
